

Equipment Planning and Management System

EPMS

Integrating complex equipment planning, procurement and project management through all phases of construction and facility management

- *Improves project budgeting and planning activities*
- *Rich set of reports to support project planning and execution*
- *Customizable user interface, each user can tailor how they view and work with the data*
- *Equipment data can be imported from all common data sources*
- *Provides management review and decisions support via customizable data views*

EPMS provides a comprehensive web based suite of online equipment planning tools that enables planners, architects, customers, and other stakeholders to work collaboratively to build and manage Construction and Equipment project budgets, planning, asset configurations, and procurement tracking throughout a project lifecycle. EPMS' enterprise portal unites all projects, documents, cut sheets (asset images) into a single secure database for internal and external web based access of project data at varying levels. The software supports an unlimited number of projects, project templates, and companies (for enterprise installations).

With its design for browser and mobile device client access, EPMS can be implemented into virtually any existing corporate Information Technology architecture, leveraging the user's preferred method of access. Possible application areas include:

- *IT Equipment*
- *Hospital & Medical Equipment*
- *Office Equipment & Furniture*
- *Conference & Event Equipment, Furniture and Fixtures*
- *Audio/Visual Equipment*
